Education

International Institute of Information Technology - Naya Raipur **2022 - 2026**
B.Tech in Computer Science: Data Science & Artificial Intelligence *CGPA: 8.3/10*

Work Experience

OneBanc Technologies Pvt. Ltd. **Dec. 2025 – April 2026**
Software Engineer Intern. — House of Product *Gurgaon, India*

- Built and improved backend systems in C#/.NET for salary routing and notifications, handling structured financial data with real-time API integrations.
- Designed data validation pipelines with schema checks, Luhn validation, and phone/email verification to ensure data accuracy.
- Developed a config-based template system to generate employee-wise messages, reducing hard-coded logic.
- Optimized MSSQL database queries and improved data workflows to support faster and more reliable API integrations.
- Built internal APIs and backend tools in .NET to support salary processing and external system communication.
- Improved reliability by adding structured logging and better error handling across data pipelines.

SKDIV Industries Pvt. Ltd. **Sept. 2025 – Dec. 2025**
Software Development Intern *Remote, Australia*

- Built core features for an Electron.js based social media desktop app (Windows Linux), focusing on chat and user interactions.
- Implemented real-time messaging using WebSockets and handled reliable message sync between client and server.
- Used IndexedDB as a local database to cache chats and user data, improving load time and keeping the app responsive.
- Designed simple data models and query logic in IndexedDB to efficiently store and fetch messages on the client side.
- Connected frontend with backend APIs and set up CI/CD workflows to automate builds, packaging, and testing.

KNUCT Technologies **Aug. 2024 – May 2025**
Software Development Intern *Remote, Delhi*

- Built Python-based data processing pipelines and optimized transformations for better performance.
- Created reusable utilities and automated validation to improve reliability of processing workflows.

Projects

PosterStash — *React, FastAPI, AWS, Firebase, Razorpay* Live Site

- Built a campus e-commerce platform with Google login, role-based access, and secure online payments.
- Designed Firebase database with collections for users, posters, orders, and carts, creating data models for smooth data flow.
- Optimized queries and backend APIs to improve data fetching speed and support faster order processing.
- Deployed backend on AWS EC2 with CI/CD pipelines; used Firebase and AWS S3 for storage and scaling.
- Scaled the platform to 1000+ users with over 5000 successful orders across campuses.

Study-Simplify — *FastAPI, React, OCR, NLP* Source Code — Live Site

- Built a platform to extract text, summarize content, and generate questions from documents and images.
- Implemented OCR pipelines and text processing using transformer-based models for better accuracy.

CodePlus — *Node.js, Express, Redis, Codeforces API* Source Code — Live Site

- Built a backend service to track Codeforces user stats, ratings, and contest performance trends.
- Used Redis as a caching layer and lightweight data store to reduce API calls and improve response time.
- Optimized data fetching and query logic to handle higher traffic and keep API responses fast and stable.
- Added email alerts for inactivity and built refresh endpoints for near real-time data updates.

HRBot-3000 — *FastAPI, Docker, Azure ML* Source Code

- Built an NLP-based system for resume screening, ATS scoring, and job description matching.
- Deployed Dockerized backend APIs on Azure ML for scalable and reliable inference.

Technical Skills

Languages: C#, Python, C/C++, JavaScript
Frameworks: ASP.NET, Node.js, Express.js, FastAPI, Django
Dev Tools: AWS (EC2, Lambda), GCP, Docker, Postman, Git, GitHub Actions, Linux, CI/CD, Shell Scripting
Databases: PostgreSQL, MySQL, MongoDB, Redis, IndexedDB
AI/ML: LLM fundamentals, RAG, NLP basics

Leadership & Activities

- Served as Vice Secretary of the college coding club (TSOC), organizing multiple hackathons and coding contests, and mentoring juniors in DSA and problem-solving.
- Co-founded PosterStash, a campus-focused e-commerce startup; launched MVP and scaled operations through targeted marketing and product improvements.
- Solved 400+ problems on LeetCode, Codeforces, and GeeksforGeeks, improving problem-solving and DSA fundamentals.
