Education

International Institute of Information Technology - Naya Raipur **2022 - 2026**
B.Tech in Computer Science: Data Science & Artificial Intelligence *CGPA: 8.3/10*

Work Experience

OneBanc Technologies Pvt. Ltd. **Dec. 2025 – April 2026**
Software Engineer Intern. — House of Product *Gurgaon, India*

- Built and improved backend systems in C#/.NET/ASP.NET for salary routing, financial systems, and notifications, handling structured financial data with real-time API integrations.
- Wrote Python scripts to automate data validation pipelines with schema checks, Luhn validation to ensure data accuracy.
- Developed a config-based template system to generate employee-wise messages, reducing hard-coded logic.
- Optimized MSSQL database queries and improved data workflows to support faster and more reliable API integrations.
- Built internal APIs and backend tools to support salary processing and external system communication.
- Improved reliability by adding structured logging and better error handling across data pipelines.

SKDIV Industries Pvt. Ltd. **Sept. 2025 – Dec. 2025**
Software Development Intern *Remote, Bangalore*

- Built core features for an Electron.js based social media desktop app (Windows Linux), focusing on chat and user interactions.
- Implemented real-time messaging using WebSockets and handled reliable message sync between client and server.
- Used IndexedDB as a local database to cache chats and user data, improving load time and keeping the app responsive.
- Designed simple data models and query logic in IndexedDB to efficiently store and fetch messages on the client side.
- Connected frontend with backend APIs and set up CI/CD workflows to automate builds, packaging, and testing.

KNUCT Technologies **Aug. 2024 – May 2025**
Software Development Intern *Remote, Delhi*

- Built Python-based data processing pipelines and optimized transformations for better performance.
- Created reusable utilities and automated validation to improve reliability of processing workflows.

Projects

PosterStash — *React, FastAPI, AWS, Firebase, Razorpay* **Live Site**

- Built a campus e-commerce platform with Google login, role-based access, and secure online payments.
- Designed Firebase database with collections for users, posters, orders, and carts, creating data models for smooth data flow.
- Optimized queries and backend APIs to improve data fetching speed and support faster order processing.
- Deployed backend on AWS EC2 with CI/CD pipelines; used Firebase and AWS S3 for storage and scaling.
- Scaled the platform to 1000+ users with over 5000 successful orders across campuses.

Branch Loans API — *Flask, PostgreSQL, Docker, Nginx, GitHub Actions* **Source Code**

- Engineered a containerized microloans REST API using Flask and PostgreSQL behind Nginx with SSL and reverse proxy setup.
- Designed multi-environment Docker Compose setups (dev/staging/prod) with isolated configs and persistent storage.
- Built CI/CD pipelines using GitHub Actions for automated testing, Trivy security scans, and image publishing.
- Implemented HTTPS-enabled local development with self-signed certificates for production-parity environments.

HRBot-3000 — *Python, Flask, Llama 3, Nomic Embeddings, Celery, Redis, Docker* **Source Code**

- Built an AI-powered resume screening platform using locally hosted Llama 3 to extract structured candidate data.
- Implemented semantic resume-to-job matching using Nomic vector embeddings and cosine similarity for skill matching.
- Designed a hybrid evaluation engine combining rule-based validation, regex extraction, and Noisy-OR aggregation.
- Built an async inference pipeline with Celery and Redis; containerized the app using Docker Compose.

Technical Skills

Languages: C#, Python, C/C++, JavaScript, TypeScript
Frameworks: ASP.NET, .NET, ReactJs, Node.js, Express.js, FastAPI, Django
Dev Tools: AWS (EC2, Lambda), GCP, Docker, Postman, Git, GitHub Actions, Linux, CI/CD, Shell Scripting
Databases: PostgreSQL, MySQL, SQL Server MongoDB, Redis, IndexedDB
AI/ML: Pandas, NumPy, PyTorch, Tensorflow, Scikit-learn, NLP, LLMs, RAG Pipelines

Leadership & Activities

- Served as Vice Secretary of the college coding club (TSOC), organizing multiple hackathons and coding contests, and mentoring juniors in DSA and problem-solving.
- Co-founded PosterStash, a campus-focused e-commerce startup; launched MVP and scaled operations through targeted marketing and product improvements, to 1000+ users with over 5000+ successful orders across campuses..
- Solved 400+ problems on LeetCode, Codeforces, and GeeksforGeeks, improving problem-solving and DSA fundamentals.
